## ENHANCEMENTS TO THE 2000 ILLUMINATED SIGNAGE RANGE

Philip Payne has redesigned its 2000 range of illuminated signage to provide an even better experience for medical facilities and other specialist signage applications. While maintaining all the trusted functionality, we've made key enhancements based on customer feedback:

### Modern, low-profile design

- Sleek new aesthetics with a slimmer profile and flat front frame
- Depth reduced from 75mm to 51mm
- Minimal dust accumulation

### Retrofit compatible

- Equivalent footprint to earlier versions
- Same mounting frame for easy retrofitting
- LED replacement signs can be fitted in the same location as older fluorescent lit models

### Installation ease

- Cover fixing screws remain in place during installation
- Keyhole slots on side of frame facilitates simpler maintenance

### Customisable messaging

- Single, twin or triple-stage messaging configurations available
