

EXRAIL

**ILLUMINATED HANDRAILS
FOR REFINED INTERIOR
AND EXTERIOR SPACES**

philippayne.co.uk

WHY EXRAIL

EXRAIL offers a discreet illuminated handrail system that guides movement, improves safety and enhances the surrounding structure without drawing attention to itself.

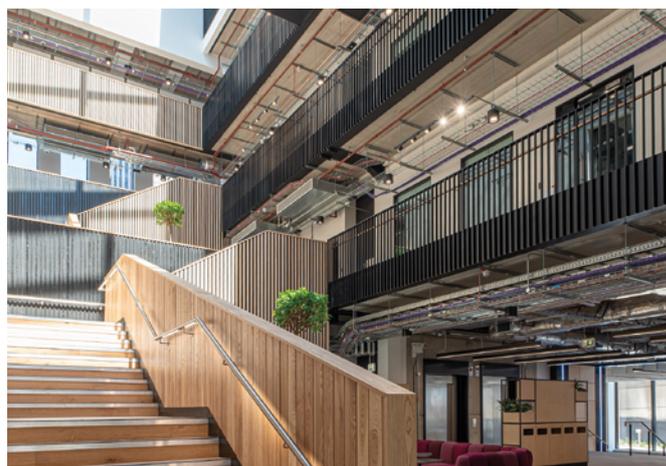

EXRAIL delivers an even line of light along stairs, ramps and walkways. The system provides clarity underfoot, supports safe navigation and complements the character of the building. Its lighting is gentle yet effective, giving a calm, continuous guide for users.

INTERIOR AND EXTERIOR APPLICATIONS

EXRAIL works across both indoor and outdoor routes, allowing project teams to create a seamless experience from first arrival through to internal spaces. Entrances, atria, external approaches, stairways and circulation routes all benefit from the same clean, unified design.

ARCHITECTURAL FOCUS

EXRAIL suits developments where the detail must be as considered as the wider architecture. It is suited to commercial schemes, cultural settings, public buildings, education, leisure and quality residential projects. The system remains unobtrusive while enhancing both aesthetics and usability.

WALL-MOUNTED

COLOUR OPTIONS

The stainless steel EXRAIL handrail can be supplied with satin brushed or bead blasted finishes or a full range of warm-to-touch RAL polyester powder coatings. The choice is yours.

TURNKEY SERVICE

Philip Payne offers a complete solution from concept to completion. From the design of the handrail and lighting arrangement to installation and commissioning by experienced teams, ensuring correct performance from day one. This provides clients with a single, reliable route from initial design to final handover.

WHY NOT BRING **EXRAIL** INTO YOUR PROJECT

Speak with our team to outline your scheme and explore how **EXRAIL** can guide movement across your building. We can provide drawings, technical support and a clear plan for delivery.
